Project Details:

➤ Invoice Generator

- This is a web application for generating invoices based on users' mobile number and identity and delivers it to the users E-Mail after every transaction.

➤ Automation of Auditor Allocation System

- This is a web application for automation of auditor's selection and allotment based on some conditions.

➤ Aadhar Enabled Payment System and Aadhar Pay

- This is a web application in which a customer can do cash withdraw, cash deposit, Mini statement as well as Balance Enquiry if the customer has done the E-kyc from its respective bank.

➤ CBC, Bank and Agent Portal for Kotak Mahindra Bank.

- This is a web application in which from CBC portal bank employee will create the agents.
- From Bank Portal the bank employee will create the CBC.
- In agent portal agent can do the transaction.
- Here I have used the concepts of SPA by which we can have to develop only one login app from which all the users can login but they will be redirected to their respective portal according to their roles and features.
